

Nursing blanket (Md 40053^{TS})

The nursing blanket is a more human restraint for restless residents.

Quality 5050: 50/50 polyester/cotton.

It is ideal for both user and nurse/caregiver. It gives the user sufficient freedom of movement and replaces unpleasant restraints. It also prevents exposure and has a preventive effect on hygiene. The residents can easily be changed by means of the zipper while they are in the blanket. The nursing blanket can be considered as a sheet, but with a built-in jacket. It is closed by a sturdy zipper that closes towards the foot end.

It is REQUIRED to always use the nursing blanket together with a bed rail.

Md 40053^{TS}
