

5.3.2 Bed tent

The bed tent is carefully designed for children and adults. The design provides a safe sleeping place and prevents users from wandering at night.

Made with high-quality durable materials, it is easy to carry in a suitcase.

The entire cover can be machine washed.

- Easy assembly, no tools required
- Also suitable for travelling (including suitcase, weight +/- 20 kg)
- Mattress thickness up to 15 cm, lying surface 200 cm x 80 cm
- Machine washable and dryable
- Fire-retardant material
- Compatible with most beds and bed frames (caution: lying surface adjustments can no longer be used)
- Accessible to the hoist
- Removable fitted sheet
- Extra removable incontinence sheet
- Stabilisation straps
- Both rails can be quickly folded down, making the entire bed accessible for care or transfers.

With the stabilisation straps, the bed tent can be safely placed on a bed frame. These straps prevent the bed tent from tilting or shifting. Made of high-tensile polypropylene with industrial Velcro.

The zipped cover sheet protects the user from entrapment. It completely encloses the mattress and bed frame, eliminating all access points and openings where something or someone could get trapped.

Providing extra fitted sheets keeps you safe in case of spills or accidents.

The fitted sheet is also available in an incontinence version.
