## Nursing blanket Md 40049<sup>TS</sup> C €

The nursing blanket is a more human restraint for restless residents. It is ideal for both user and nurse/caregiver. It gives the user sufficient freedom of movement and replaces unpleasant restraints. It also prevents exposure and has a preventive effect on hygiene.

The residents can easily be changed by means of the zipper while they are in the blanket. The material is very strong, has a high tear resistance and is flame-retardant. The nursing blanket can be considered as a sheet, with a built-in jacket. It is closed by a sturdy zipper that closes towards the foot end.

Quality 1010: Breathable, moisture-repellent and flame-retardant fabric with a high tear resistance.

**It is REQUIRED to always use the nursing blanket together with a bed rail.**

### Md 40049<sup>TS</sup>
