Nursing blanket 40051^{TS} CE

The nursing blanket is a more human restraint for restless residents. It is ideal for both user and nurse/caregiver. It gives the user sufficient freedom of movement and replaces unpleasant restraints. It also prevents exposure and has a preventive effect on hygiene.

The residents can easily be changed by means of the zipper while they are in the blanket. The material is very strong, has a high tear resistance and is flame-retardant. The nursing blanket can be considered as a sheet, with a built-in jacket. It is closed by a sturdy zipper that closes towards the foot end.

Quality 1010: Breathable, moisture-repellent and flame-retardant fabric with a high tear resistance.

It is REQUIRED to always use the nursing blanket together with a bed rail.

Md 40051^{TS}

1. Place the lower layer under the mattress and attach the upper part to the lower layer with the dark grey zippers.

2. Open the light grey zipper at the front and let the patient sit on the mattress. Insert both arms through the armholes in the jacket and close the zipper.

3. Close the protective strip with the plastic snap fasteners and raise the side rails into high position.
